### RICE

Rice is one of the most important foods in the world. This is because people who live in China, Japan and India and other parts of Asia, live mainly on rice. In China the word 'rice' is used in one of their greetings. People say 'Have you eaten your rice today?' This is because rice is so important to the Chinese. Although most of the world's rice is produced in Asia, sometimes it has to be imported. This happens when rice doesn't grow properly. If there is no rice harvest, people in Asia may die. Rice was first grown in China about five thousand years ago and it was then introduced into Egypt. Rice was first grown in Europe, in Italy, about six hundred years ago. It was not grown until three hundred years ago in the United States. North Americans eat some rice but they prefer bread and potatoes. Some rice is grown on hills but most rice is grown on flat land near lakes and rivers because rice needs a lot of water. In the rice- growing parts of the United States, rice is planted and picked by machine but in most Asian countries everything is done by hand.

**Fruit fly fix**

It is breakfast time. You have been looking forward to eating a nice ripe banana ever since you woke up. Just when you reach for the delicious piece of fruit on your counter, you see something that makes you much less hungry: a swarm of fruit flies! Fruit flies are tiny insects that are attracted to ripe or rotting fruits and vegetables. The flies not only eat the fruit, they also lay their eggs there. A single fruit fly can lay up to

500 eggs on the surface of a piece of fruit. Within eight days, the fruit flies that hatch from these eggs are full adults that can then lay their own eggs. As you can see, what might start out as a small fruit fly problem can become very large very quickly. Although there is a chance fruit flies can carry germs on to your food, this is not very likely. Fruit flies are annoying, but they probably will not hurt you. Because they are such a

**nuisance**, however, most people want to get rid of these pesky bugs as quickly as possible. Some people use pesticide sprays on the fruit flies. Although this will kill the flies, it will also spread harmful poison all over your kitchen. Luckily, there is also a completely safe way for you to get rid of fruit flies in your house.

The first step is for you to remove all fruits or vegetables from your counter. Store these items in the refrigerator or in sealed containers. Clean up any spilled juice or bits of food that might be on the floor. Take out the trash and empty the recycling bin. Wash any dirty dishes that are in your sink. Doing all of these things will stop new fruit flies from finding food or places to lay their eggs. Next, make a trap to catch all of the remaining fruit flies in your house. First, fill a small bowl with a few tablespoons of vinegar. Then, put a piece of very ripe or rotting fruit into the vinegar. Cover the bowl very tightly with a sheet of plastic wrap and poke a few very small holes in the wrap with a fork. If all goes according to plan, the flies will enter the trap

through the holes but will be unable to fly back out. This trap will catch all of the remaining fruit flies. You can either kill these flies or release them outdoors. Fruit flies can be a pest, but they do not have to make you crazy. With a little effort, you can get existing flies out of your house and prevent new ones from taking over your kitchen.

1. From this passage, we learn that fruit flies

- A. die immediately after they lay their eggs  
B. can grow into adults after only 8 hours.

- C. are mostly harmless.
- D. fruits and vegetables can fly.

2. As used in paragraph 3, a **nuisance** is something that

- A. bothers you
- B. can be dangerous
- C. grows fast
- D. is very small

3. According to the passage, why should you not use pesticide spray to kill fruit flies? [1]

- A. most sprays do not actually kill all of the fruit flies
- B. buying sprays can get expensive if you need to use a lot of them
- C. the sprays take too much time to work
- D. it can be dangerous to use them in your kitchen

4. Based on the information in the penultimate (next-to-last) paragraph, we can understand that the author thinks that [1]

- A. some people do not mind having fruit flies in their house
- B. some people do not like killing insects
- C. fruit flies do not like vinegar
- D. making a fruit fly trap can be difficult

5. We can stop new fruit flies from finding food if we [1]

- A. wash fruits
